Lab Report. 01

Title: Lab Report

Course title: Computer Graphics Lab

Course code: CSE-304

3rd Year 1st Semester 2022

Date of Submission: 28/05/2023

Submitted to-

Dr. Mohammad Shorif Uddin

Professor

Department of Computer Science and Engineering

Jahangirnagar University

Savar, Dhaka-1342

And

Dr. Morium Akter

Associate Professor

Department of Computer Science and Engineering

Jahangirnagar University

Savar, Dhaka-1342

Scan conversion of a point:

Source code:

```
#include<bits/stdc++.h>
using namespace std;
int main()
{
  float x,y;
  cout << "Enter point(x,y)" << endl;
  cin >> x>>y;
  int ax,by;
  ax = floor(x);
  by = floor(y);
  cout << "Scanned points are
  ("<<ax<<","<<by<<")"<<endl;
}</pre>
```

Output:

C:\Users\Lab-2\Desktop\gfx\point.exe

```
Enter point(x,y)
4.465 9.324
Scanned points are (4,9)
Process returned 0 (0x0) execution time : 6.171 s
Press any key to continue.
```

Scan converting a line using DDA algorithm:

Source code:

```
#include<bits/stdc++.h>
                                       int main()
#include<graphics.h>
using namespace std;
                                           int gd = DETECT, gm;
void drawlinedda (int x1, int y1,
                                           initgraph(&gd, &gm, "");
int x2, int y2)
                                           int x1, y1, x2, y2;
                                           cout << "Enter first coordinate</pre>
{
    int dx = x2 - x1;
                                       (x1,y1):" << endl;
    int dy = y2 - y1;
                                           cin >> x1 >> y1;
                                           cout << "Enter first coordinate</pre>
    int steps = abs(dx) > abs(dy) ?
abs(dx) : abs(dy);
                                       (x2,y2):" << endl;
    float xincrement =
                                           cin >> x2>>y2;
static cast<float>(dx) / steps;
                                           drawlinedda (x1, y1, x2, y2);
    float yincrement =
                                           delay(50000000);
static cast<float>(dy) / steps;
                                           closegraph();
    float x = x1;
                                           return 0;
    float y = y1;
                                       }
    for(int i=0; i<=steps; i++)</pre>
putpixel(static cast<int>(x),static
cast<int>(y),WHITE);
        x += xincrement;
        y += yincrement;
    }
```

Output:

C:\Users\Lab-2\Desktop\gfx\DDAline.exe

```
Enter first coordinate (x1,y1):
5 6
Enter first coordinate (x2,y2):
50 60
```

Scan Converting a line using Brasenham Algorithm

Source code:

```
#include<bits/stdc++.h>
                                       if(dt < dx)
#include<graphics.h>
using namespace std;
                                                   err += dx;
void drawlinebresenham(int x1,
                                                   y1 += sy;
int y1, int x2, int y2)
                                           }
    int dx = abs(x2 - x1);
    int dy = abs(y2-y1);
                                      int main()
    int sx = (x1 < x2)? 1 : -1;
    int sy = (y1 < y2)? 1 : -1;
                                           int qd = DETECT, qm;
    int err = dx - dy;
                                           initgraph(&gd, &gm, "");
    while(true)
                                           int x1, y1, x2, y2;
        putpixel(x1,y1,WHITE);
        if(x1==x2 \&\& y1==y2)
                                           cout << "Enter first</pre>
                                      coordinate (x1,y1):" << endl;</pre>
            break;
        int dt = 2 * err;
                                           cin >> x1 >> y1;
                                           cout << "Enter first</pre>
        if(dt>-dy)
                                      coordinate (x2, y2):" << endl;</pre>
            err -= dy;
                                           cin >> x2>>y2;
            x1 += sx;
                                      drawlinebresenham (x1, y1, x2, y2);
        }
                                           delay(50000000);
                                           closegraph();
                                           return 0;
```

Output:

Scan converting a circle using Brasenham circle algorithm:

Source code:

```
#include <iostream>
                                     else
